**URTICON™**  
Sterile Container System **STERILE CONTAINER SYSTEM**

The mechanism of the lock can stand stationary in every required position and it is adjustable into lid up to 180°

In reliable position, the containers can be put on top of each others without sliding over the sides.

The security plastic seals will be broken upon the lock is opened and this action makes it possible to follow up the sterilization process.

By means of the locking latches, the holders of the filters enable the filters be changed quickly.

The mechanism of the lock can be utilized as the lid handle.

The silicon gaskets placed around the inside of the lid, enable the security of the sterilization process.

The colored labels which give the description and the department of the sterile item, are in changeable features.

The silicon gaskets placed around the inside of the lid, enable the security of the sterilization process.

The holding pins and plates for separation wire baskets or desire.

The silicon mat, for placing the micro instruments.

Silicone handle has available in six different colors and detachable by user.

The draperetainer.

Spiral holder

Wire bottom, balanced placement and steam circulation safety.

The fixation clamps for the cylindrical instruments in different sizes.

The trolley for protection and transporting of the containers between the departments.

The method of mounting - de-mounting the safety lid of the fix model container.

The Barrier model means mechanical filtering system. The valves of barrier model systems have three different positions during sterilization cycle such as relax position before sterilization and after sterilization position.

1

Before sterilization valves are in relax position.

2

During the sterilization by effect of vacuum the valves are opened completely and the dry air goes out of the container.

3

At the end of the sterilization cycle the valves are opened the way by effect of vacuum and the sterilization cycle is completed.

4

At the end of the sterilization cycle the valves are opened the way by effect of vacuum and the sterilization cycle is completed.

5

After sterilization the valves are in relax position.

Explanation of Symbols: Applicable Not Applicable Limited Application

1) In order to avoid mistakes with regards to service, operation and/or when loading the sterilizer, please refer to table 1 for correct or wrong combination of sterilization containers for standardized steam sterilization procedures.

2) Only sterilization containers guaranteeing evaporation or discharge of condensate are suitable above.

3) Gravitation procedures having no drying device do not guarantee a sufficient after-drying effect.
